

The play that depicts how farming affects Biodiversity and Climate change and youth development in Cameroon.

The play demonstrates how climate change impacts on land, forests and young peoples lives.

Better World Students Nature Club (BSNC) is a case study of conservation strategies, the work of Climate Change Networks and sustainability education.

After the road show, we intend to launch a national competition on development Education.

Our Dance and Theater Troupe is Better World's tool for combining indigenous knowledge, traditional art and science for non formal youth

BETTER WORLD CAMEROON

WHY CHANGE CHANGED

**IMPROVING NON FORMAL
EDUCATION FOR YOUTH**

PREAMBLE

World leaders have become too preoccupied thinking about how to deal with climate change and rising food crises without first deciding with all people of the world what it is we want accomplished.

Better World Student's Nature Club (BSNC) wants them to know that, how they make their decisions very much affects lives in Africa and what African people really want.

BSNC is gate way of generating interest and understanding between young people of other countries and Cameroon.

Our theatre piece is a call to action to defend our culture and what we eat.

An African initiative that guides young people to determine the quality of life they want through their food systems in a way that is socially relevant, economically sustainable and ecologically sustainable .

We are using indigenous knowledge and science to put on the world development agenda positive African values that can guide people to the life we are all **seeking which our umbrella NGO calls 'A BETTER WORLD'.**

We will like our audience to speak up on environmental degradation and sanitation and those who would like to start a support group to contact us at our Head Office at Biyem Assi where we teach young people to cultivate healthy and affordable food. The effects of climate change on agriculture are now so tangible that the issue is best addressed with tools of Social Communication, Environmental Science and International Solidarity.

BSNC is helping through the Ndanifor Community Garden Project to plant over 1000 native trees within the UNEP Billion tree Program to create a model for young Cameroonians, a balance between community, our environment and business. Our project is attractive for youth employment, low cost clean appropriate technology and sustainable
